

Environmental seminar with a practical orientation tailored to the needs of the chemical and pharmaceutical industry

Environmental workshops for employees in the chemical and pharmaceutical industry

Customer

- * In cooperation with other partners and clients ecoSign has carried out various environmental workshops for globally leading chemical and pharmaceutical companies

Objective and benefit

- * The content of the one- to two-day seminars is adjusted to the specific needs of the chemical and pharmaceutical industry. Environmental issues are illustrated and discussed based on lectures and case studies.

Subjects of the environmental seminar (selection)

- * Global trends and future challenges in environmental legislation
- * Sustainable energy use in the chemical-pharmaceutical industry
- * Risk assessment of chemical substances
- * High complexity and stringent requirements call for an overall approach, from process development through source control in production to customized end-of-pipe treatment
- * Overview of common wastewater treatment and air pollution control technologies with examples of application in the chemical-pharmaceutical industry
- * Various case studies and team workshops
